

February Nature Walk  
Saturday, February 15, 2020

**Our day started with 29 Nature Walkers watching John present some new friends he found for us before the walk. He showed us a Florida Brown Snake, a Florida Water Snake, an Eastern Garter Snake and a Eastern Glass Lizard (no legs but has eyelids and earholes, unlike a snake).**

**Along the trail we found these insects : an Ornate Pennant Dragonfly, a Palmetto Bug (also know as a cockroach), and an Horace Duskywing Butterfly. The plants found were Candyroot, long leaf pine cones and an bromeliad air plant called Tillandsia. Catbirds, Towhees, yellow rump warbler were heard and seen.**

# Pine Warbler

Pine Warbler

Wood Roach

Long Leaf Pine

Tillandsia (Wild Pine)

Wild Bachelor's Buttons

# Pennant Dragonfly

Florida Brown Snake

**As we left the South Preserve Trail one more exciting animal was found up a tree - a Coral Snake! John then proceeded to capture it in a butterfly net for all to see. Quite a day.**
